CONFERENCE AIMS & OBJECTIVES

System Science and Engineering have emerged as a research field that covers a wide spectrum of modern technology. A system can be considered as a collection of entities and their interrelationships gathered together to form a whole greater than the sum of the entities. It also involves people, organizations, cultures, activities and interrelationships among them. While systems composed of autonomous subsystems are not new, increased data density, connectivity and ubiquitous computational resources have increased their interdependence and interaction complexity. This has in turn made the job of planning, developing and deploying complex systems even more difficult.

The International Conference on System Science and Engineering 2019 (ICSSE 2019) will take place in Dong Hoi City, Quang Binh province during July 20-21, 2019. This event will provide scholars, experts, engineers and practitioners from all over the world with a great opportunity for to present the latest system design concepts, research results, developments and applications, as well as to facilitate interactions between scholars and practitioners. ICSSE 2019 will feature plenary speeches in emerging technology topics given by world renowned scholars. The proceedings of ICSSE 2019 will be published by the IEEE Xplore with online ISSN 2325-0925 and ISBN 978-1-7281-0525-3. Best paper awards will be given to those with outstanding achievements.

The conference welcomes all submission of original research papers in all aspects of system science and engineering. To broaden the scope and promote participant, organized sessions will also be welcomed and incorporated into the ICSSE 2019 program.
